

NATALIA BAEZ DE LA LUZ

DATA ANALYST | DATA SCIENTIST | PHYSICIST

Physicist and Data Science professional with **2+ years** of combined experience across **analytics consulting, software development** and **data-driven projects**. Strong background in **SQL, Python, Power BI**, data validation, exploratory analysis, reporting, stakeholder communication and technical documentation. Experienced translating business needs into data requirements, KPI definitions, validation rules and actionable deliverables. Physics graduate with a quantitative foundation and hands-on experience using cloud and scalable data tools including **Azure Databricks, Microsoft Fabric, PySpark, BigQuery** and **Google Cloud Platform**. Passionate about connecting scientific rigor with real-world technology applications

EDUCATION

FACULTY OF SCIENCE (DEGREE IN PHYSICS), UNAM.

I graduated in **September 2023**. Beyond my academic pursuits, I actively engage in scientific outreach and teaching projects. I took my elective credits about programming classes to guide my professional development in this area.

THESIS STUDENT, Physics Institute, UNAM.

November 2022 – June 2023.
8 months
I completed my thesis on atomic physics, titled **Atom-Field Interaction in Dispersive Optical Lattices**. My research was designed to be applied to Bose-Einstein Condensates.

LANGUAGES

 Spanish

 English - B2

 German - A1

SOFT SKILLS

Teamwork, proactivity, creativity, responsibility, communication skills.

CONGRESSES

- LXV National Congress of Physics – Presenter (2 posters)
- LXVI National Congress of Physics – Talk + poster

WEBSITE

WORK EXPERIENCE

DATA SCIENTIST & DATA ANALYST

DATAKNOW

October 2025 - June 2026
9 months

- Gather, analyze and validate information requirements for analytics and machine learning use cases, aligning business needs, source data availability and expected BI or analytical deliverables.
- Prepare, clean and validate datasets using Python, SQL, pandas and PySpark; identify data quality issues, missing values, outliers, distribution shifts and business-relevant patterns.
- Build reports, visualizations and executive summaries to communicate findings, model performance, data risks and recommendations to technical and non-technical stakeholders.
- Document assumptions, transformation rules, validation criteria, experiments, business logic and modeling decisions to ensure traceability and handover readiness.
- Work with Azure Databricks, Microsoft Fabric, Power BI, SQL and Python to process data at scale and generate actionable information for consulting projects.

WEB DEVELOPER

IMSS Bienestar COFEPRIS

2024 - 2025
1.5 years

- Participated in requirements analysis, architecture discussions and functional definition for data-centered web systems in institutional environments.
- Collaborated with operational stakeholders to translate business needs into system functionality, data requirements and documented technical specifications.
- Implemented web modules with Django, Angular and Node.js in regulated contexts, emphasizing traceability, structured documentation and responsible handling of information.

TEACHER ASSISTANT

Science Faculty UNAM

2023
6 months

Computing class for physicists. Supported students in programming, numerical methods and structured problem solving, explaining technical concepts clearly and rigorously.

CORE SKILLS

Business Intelligence & Reporting: Power BI, dashboard design, KPI tracking, automated reporting, executive summaries, business performance analysis

Data Engineering & Processing: Python, SQL, PySpark, pandas, NumPy, batch transformations, data validation, data quality checks

SQL & Data Modeling: SQL queries, analytical datasets, data validation, data marts, transformation logic, quality checks, reconciliation

Data Analysis & Scripting: Python, pandas, NumPy, PySpark, exploratory analysis, metrics, automation, statistical analysis

Stakeholder & Requirements Management: requirements gathering, functional documentation, business rules, acceptance criteria, technical-to-business communication

Cloud & Development: Azure Databricks, Microsoft Fabric, Google Cloud Platform, BigQuery, Git, version control, Django, Angular, Node.js, JavaScript, HTML, CSS

Machine Learning Context: forecasting, model evaluation, LightGBM, XGBoost, scikit-learn, feature engineering, MLflow

PROJECTS

- Digital Sales Analytics**

This project analyzes consumption patterns in the digital products market using a simulated dataset covering 12 months. The analysis focuses on identifying strategic opportunities to improve profitability and customer retention in the sale of ebooks, online courses, templates, and music
- Stress Classification from Physiological Signals**

Built a classification pipeline with preprocessing, feature extraction and Leave-One-Subject-Out validation.
- Facial Expression Recognition**

A Deep Learning System for Real-Time Emotion Recognition from Grayscale Webcam Feeds
